DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Nick Bromer on Wed., August 29, 2007.

The application has been amended as follows:

In **claim 20**,

On line 12, "arc to meet", has been replaced with - - arc such that it meets - -

On line 13, "perpendicularly", has been replaced with - - perpendicularly at two points - -

ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

With regard to claim 19:

The prior art of record fails to teach or to fairly suggest a loudspeaker as recited in claim 19, specifically comprising: a generally arcuate source of wind having a radius

r , measured from a single center point, such that the radius is greater than 1.00 feet and such that the (radius x wave) number of the frequency is equal to or greater than one; and further wherein the loudspeaker further comprises a symmetry baffle mount which is aligned perpendicular to a plane including the arcuate source and its radius, and finally wherein the center point of the arc, that point from which r is measured, lies adjacent to the symmetry baffle.

With regard to claim 20,

The prior art of record fails to teach or to fairly suggest a method of creating sound, as recited in claim 20, specifically comprising: a generally arcuate source of wind having a radius r , measured from a single center point, such that the radius is greater than 1.00 feet and such that the (radius x wave) number of the frequency is equal to or greater than one; and further wherein the loudspeaker further comprises a symmetry baffle mount which is aligned perpendicular to a plane defined by the arcuate source, and finally wherein the arcuate source of wind is defined about an arc such that it meets the symmetry baffle in a perpendicular orientation at two points along its arc.
